Execution & Submission

Colloquium

  The Poster

  The Presentation

Your master thesis consists of three parts:

1. Academic (written) part
2. Practical part
3. Colloquium

The academic and practical part should relate to each other. However, each part must also work on its own, with a separate contribution / storyline.

Academic Part

§ 6 (3) The academic part of the Master's thesis should prove that the student has the ability to conceptualize and contextualize discourse, critical reflection and academic work. The content should relate to the practical part of the master thesis.

[...]

§ 6 (5) The thesis should be a minimum of 30 (80,000 characters) and a maximum of 80 pages (180,000 characters), excluding table of contents and reference list. Characters

include spaces and footnotes. The following or equivalent specifications are to be used for the layout. Font: Times New Roman. Font size: text: 12 pt; footnotes: 10 pt. Line spacing: text: 1.5 lines; footnotes: 1 line. Margins: left 3 cm; right 2 cm, top and bottom 2.5 cm.

The work can be supplemented by an appendix and audiovisual media. A summary of between 100 and 300 words in German and English must be included at the beginning of the thesis. The German and English versions should correspond in terms of content.

(Prüfungsordnung, CTech_MA_SPO_2019)

Further requirements and notes

- The written part can be in German or English.
- The written part must refer to the practical part and should include (if applicable) about the practical part: motivation / artist statement / context, description of the project, technical setup, connection of academic and practical part. How you integrate these points is up to you.
- With each copy of the written part you must submit an appendix as USB stick with sources and the audiovisual documentation of your practical part
- No ring binding may be used for the library copy.
- If Lena is one of your advisors, she prefers her reading copy to be double-sided print with a ring binding (this is no requirement just a preference!).

Practical Part

§ 6 (2) The practical part of the master's thesis includes a project that uses technology creatively and innovatively and develops or analyzes it further. It serves to demonstrate that the student is capable of conceiving modern technology in an interdisciplinary environment and significantly shaping novel technological-creative media productions.

(Prüfungsordnung, CTech_MA_SPO_2019)

Further requirements and notes

- For the practical part the same deadline applies as for the academic part. Hence, everything regarding the practical part has to happen before the deadline of the academic part.
- There is the option to present your practical part in person to your advisors. This is optional. You are responsible for scheduling a date with your advisors before the submission date of the academic part.

- The practical part must be thoroughly documented and that documentation must be submitted as appendix to the academic part.
- You can receive up to 500 EUR for materials for your practical work. Your main advisor decided whether you receive any funds and for what. Keep in mind that whatever the Filmuni pays for, the Filmuni owns.

Registration

Prerequisite for registering the academic part of the Master's thesis with the examination office is proof of at least 67 credit points (submitted as Leistungsnachweis to the examination office). You can not have 67 points without completing CTech II. The registration of the academic part of the Master's thesis requires the signatures of your advisors and the dean of studies (Lena).

For the registration you need the title of the academic part of your thesis. The title should not be changed after registration. Hence, we advise to keep the title somewhat broad.

You must access all required documents for the registration and further information from the examination office in the eCampus system (in the menu “Service”).

You must present your thesis ideas in P&R before registration. The presentation should be < 20min. It is your responsibility to schedule a presentation slot for P&R in time.

Time-line

You can start and submit your thesis any time. However, each started term counts as towards your semester count. Usually students complete their master at the end of a term:

- If you want to complete you master by the end of a **summer term**
  - You must register before **30.04.** of that year
  - Your colloquium will be in the last week of September
- If you want to complete you master by the end of a **winter term**
  - You must register before **31.10.** of the previous year
  - Your colloquium will be in the last week of March

Execution & Submission

- In case of illness you must hand in a Attest (doctor's note) to the examination office and your advisors within the first three days of sickness. Then your submission deadline is extended according to the Attest.
- The thesis must be submitted within the specified deadline in four bound copies (no ring binding may be used for the library copy) and in electronic form (USB stick with written part and the appendix for each copy) to the examination office. (Adjusted from Prüfungsordnung RSP_2023a)
- In case of an unjustified late submission the master thesis is failed.
- You can repeat thesis and colloquium once with a different topic.

Colloquium

The colloquium is counted for with 3 ECTS and is graded individually.

14 days before the colloquium, all ECTS have to be completed and submitted as Leistungsnachweise to the examination office.

The colloquium takes about 1h and is split into 30 min for your presentation and 30min for our questions. Furthermore, the colloquium includes the handing in of a poster.

The Poster

You have to hand in a digital version of an vertical A2 poster, as well as a printed version on paper. The poster must summarize the theoretical and practical parts of your master thesis. Hence, the poster must include:

Theoretical Part

1. Problem statement
2. Approach
3. Results
4. Relevance for CTech
5. Outlook

Practical Part

1. Topic and personal motivation
2. Results including at least one image

You have to hand in the digital version of the poster one day before your colloquium, and you have to bring the printed version with you to the colloquium.

The Presentation

The presentation must include two parts:

1. the presentation of the theoretical and practical part of your thesis (ca. 20 min)
2. aspects that are specifically worked out for the colloquium (ca. 10 min)

Part 2 should cover (if not yet mentioned in part 1)

- A critical reflection of your approach, implementation and results
- Your motivation
- The interconnections of the theoretical and the practical parts
- Discarded work, failure cases, etc.
- A (short) reflection on your process
- Your learning
- Your next steps with the topics (if any?)
- Contextualization and and the potential impact of your work
    - What is its relevance for Creative Technologies?
    - Who could benefit from it, and how?
    - How could the work be continued?
